Under the Act of March 3, 1879

A new textbook in biology  
Treated from the modern point of view

## ELEMENTARY BIOLOGY

By BENJAMIN C. GRUENBERG

*Julia Richman High School, New York*

An introduction to the science of life, for beginning classes in the high school or the junior high school. Types of problems have been selected that best illustrate man's method of adapting himself or his surroundings to his needs and that show his dependence on the accumulations of the past. The book deals with the world of life as a whole rather than with the arbitrary divisions of specialists, each main division including plants and animals.

More material is presented than can comfortably be used by most classes. This allows the teacher the opportunity to select his material according to individual preferences, local or temporary conditions, and the interests of his students.
